

HOW TO INSTALL BUBBLES AND ICEBERG MOSAIC

Step 1: Start installation by pointing all of the sheets directional tags in the same direction. Keep tiling area to minimum; this will prevent adhesive settling prior completion. (please see adhesive manufacturer recommendation)

Step 2: Squeeze the sheets together tightly to obtain a seamless joint.

Step 3: To obtain a straight and even edge, mark the required sheet edge prior installing the sheet and remove excessive protruding components.

Step 4: Continue to assemble more sheets until the adhesive area covered.

Step 5: Collect small mosaic pieces and round components from a sacrificial sheet.

Step 6: Use the small mosaic pieces and round components from Step 5 to fill any excessive openings.

Step 7: Continue filling any visible gaps until the full area is completely covered.

• For best installation results we recommend using matching colour grout.
