HOW TO INSTALL WATERCUBE® MOSAIC

Step 1: Start laying the sheets from bottom up. Arrange all mosaic sheets with the corner directional tag pointing in the same direction.

Step 2: Continue until the full area is covered, keeping away from internal corners and edges.

Step 3: To complete edge closure, mark each sheet individually one at the time.

Step 4: Remove each component from the mesh.

Step 5: Cut each piece individually with a diamond blade wet saw machine.

Step 6: Continue to cut each individual mosaic component. To avoid miss-matching, do not handle more than two sheets at a time.

Step 7: If the edge will remain exposed, grind each piece before installing.

Step 8: Once all the pieces are cut and grinded they can be installed to form a straight finished edge.
